Yiran Jiao

Technical AI Product Manager | GENERATIVE AI | LLM | AGENTS | MULTIMODAL AI
Website: https://yiranjiao.github.io/ | E-mail: yiranjiao77@gmail.com | Tel: +1(551)697-3663

SUMMARY

Technical AI Product Manager with 4+ years of experience building and shipping LLM, RAG, agentic, and multimodal AI products. Currently pursuing an M.S. in Computer Science at NYU, with hands-on experience driving AI products from 0-to-1 through production, partnering with engineering and ML teams to translate complex AI capabilities into scalable products with measurable business impact.

EDUCATION

New York University, New York, US — *M.S. Computer Science* 09/2026–Present

The University of Manchester, Manchester, UK — *M.S. Health Data Science* 09/2021–09/2022

Beijing Normal–Hong Kong Baptist University, China — *B.S. Statistics* 09/2017–06/2021

PROFESSIONAL EXPERIENCE

Kwai Technology Co., Ltd, Beijing, China 06/2025–08/2026
AI Product Manager | *Commercial Product Department*

Digital Human Livestreaming (Agentic AI & Multimodal Generation)

- **Owned the product strategy and roadmap for major AI capability expansion of Kwai's AIGC livestreaming product**, leading the introduction of agentic orchestration, multimodal generation, and fully managed workflows from concept to production; generated **$3.8M/d in advertising revenue and $7.35M/d in GMV**.
- **Designed and productized an MCP-based multi-agent orchestration system** to automate complex livestream planning across product analysis, script generation, avatar selection, layout, and interaction control, enabling autonomous end-to-end execution with minimal manual configuration.
- **Expanded digital-human livestreaming from scripted presentation to realistic product interaction** by building an end-to-end multimodal pipeline that translated product context and livestream scripts into host action plans and coherent audio-video product demonstrations, improving expressiveness and interaction quality.
- **Established the AI evaluation and optimization framework** across text-audio-vision coherence, script quality, interaction naturalness, and scene realism; led A/B tests and statistical hypothesis testing to quantify model and advertising impact and prioritize product/model iterations.

BYD Co., Ltd, Shenzhen, China 12/2022–05/2025
AI Product Manager | *AI Lab*

AI Customer Service (Conversational AI and Enterprise Knowledge Base Construction)

- **Owned the 0-to-1 AI customer service roadmap**, identifying knowledge Q&A and complaint diagnosis as priority use cases through frontline research; validated RAG and Agent architectures through a 3-month POC and scaled proven capabilities across Knowledge Base, Agent Assist, Text Bot, Voice Bot, and AI Ops.
- **Built a domain-adapted enterprise RAG system over 100K+ structured and unstructured documents**, combining OCR, hierarchical parsing, domain-aware chunking, hybrid retrieval, reranking, and domain-term normalization to improve enterprise knowledge retrieval and reasoning.
- **Designed workflow-driven AI agents with tool invocation**, orchestrating CRM queries, service-log diagnostics, and order-verification APIs to perform autonomous root-cause analysis and guide resolution of complex after-sales cases.
- **Delivered 90%+ assistant accuracy, 71% bot containment, 49.8% shorter service time, and 57% shorter case-entry time**, materially improving service efficiency and frontline productivity.

PROFESSIONAL SKILLS

AI/Product: LLMs, RAG, Agentic AI, MCP, Multimodal AI, AI Evaluation, A/B Testing, Product Strategy

Technical: Python, SQL, Tableau, C/C++, R Language, MATLAB
